Dear Dully,

**Re: Concrete Optimizer**

For many years, Spring Prairie Precast have produced high quality concrete. As a precast company, the accuracy of the slump is crucial for us. Although performing the cone tests gave us good results, they are time consuming, and involve human interference.

Since I have purchased the Concrete Optimizer from you on June, 2010, our lives have changed. No more cone tests, no need to add extra amount of cement to compensate for the strength. The fact that the Concrete Optimizer not only measures the slump so accurately, but also adjust the slump automatically by controlling the water or admixtures addition, saves us valuable time and consequently money.

We have grown to depend on the Concrete Optimizer, and find it most reliable. In my humble opinion, every ready mix producer, as well as precast producers, should be using the Concrete Optimizer.

Yours Sincerely,

Mark Wipf
